8.2 Exposure controls:

8.2.1. Appropriate technical controls:

No further data; see item 7.

8.2.2. Individual protective measures, such as personal protective equipment:

General protective and hygienic measures:
Keep away from foodstuffs, beverages and feed. Remove contaminated clothing immediately and thoroughly clean it before using it again. Wash hands before breaks and at the end of work. Avoid contact with the eyes and skin. Do not eat, drink, smoke or sniff while working. Use skin protection cream for skin protection. Ensure that washing facilities are available at the workplace.

Respiratory protection:
Use suitable respiratory protective device only when aerosol or mist is formed (FFP2 according to EN 149)

Hand protection:
Hand protection: Chemical resistant protective gloves according EN ISO 374 The glove material has to be impermeable and resistant to the product. Due to missing tests no recommendation to the glove material can be given for the product. Selection of the glove material on consideration of the penetration times rates of diffusion and the degradation. Check protective gloves prior to each use for their proper condition. Preventive skin protection by use of skinprotecting agents is recommended. To avoid skin problems, reduce the wearing of gloves to the required minimum.

Material of gloves:
The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

Penetration time of glove material:
The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

For the permanent contact gloves made of the following materials are suitable:
- Polychloroprene (material thickness ≥ 0.5 mm ; breakthrough time ≥ 480 min.)
- Nitrile rubber (material thickness ≥ 0.35 mm ; breakthrough time ≥ 480 min.)
- Butyl rubber (material thickness ≥ 0.5 mm ; breakthrough time ≥ 480 min.)
- Fluororubber (material thickness ≥ 0.4 mm ; breakthrough time ≥ 480 min.)
- Neoprene (material thickness ≥ 0.5 mm ; breakthrough time ≥ 480 min.)

Not suitable are gloves made of the following materials:
Non-liquid-tight gloves made of fabric, leather or similar materials.

Eye/face protection:
In case of splash risk use tightly fitting safety goggles according to EN 166.

Body protection:
Protective work clothing

Risk management measures:
An operator training/guidance in the correct use of personal protective equipment is necessary to ensure the required level of effectiveness.

8.2.3. Environmental exposure controls:

Avoid release in the environment. Use the surplus or dispose it of properly.
